TECHNICAL REFERENCE

Images and embeds

Page-bundle images with alt text, captions and credits; embeds that stay readable.

JWOGRADY

Two shortcodes live in `layouts/shortcodes/`. Both are mine, not the theme's — the theme ships nc shortcodes at all.

1. Images

```
{{< image src="my-screenshot.png" >}}
```

Resolves the name as a **page resource** first (a file sitting next to `index.md` in a bundle), then falls back to a global asset. It hands off to the theme's own `figure.html`, so an inline image is styled identically to a featured one and gets the same treatment: anything wider than 1400px is resized and converted to WebP at q82.

Alt text, caption and credit come from the `[[resources]]` block in front matter, not from shortcode parameters.

2. Spotify

```
{{< spotify type="album" id="6mnGRO87UFiKOoHL3BezZ7" >}}
```

`type` is `track`, `album`, `playlist`, `artist`, `show` or `episode`. Height is chosen per type — 352 for a track, 452 for an album or playlist — and `compact="true"` gives the 152px bar.

Finding the id: from a share link like `open.spotify.com/album/6mnGRO87UFiKOoHL3BezZ7?si=abc123`, the id is the segment after the type. Drop the `?si=` — it is a share-tracking parameter, not part of the address.

3. Raw HTML

`markup.goldmark.renderer.unsafe = true` is set in `hugo.toml`, so a pasted iframe works withou a shortcode. It needs a blank line before and after it or Goldmark folds it into the adjacent paragrapl

Prefer the shortcode. A pasted iframe hardcodes a border radius and a height that will not match th next one you paste.
